89% ML Model Accuracy

50K+ Records Processed

18% Revenue Growth Tracked

4 Certifications Earned

• WHO I AM •

Turning data into decisions that matter

I'm a **CS undergrad at IIIT Tiruchirappalli** (graduating April 2026), passionate about finding the story hidden in every dataset. I don't just run queries — I ask *"so what?"* after every analysis.

From designing Power BI dashboards that track **10,000+ transactions in real time** to building ML models with **89% accuracy**, I bridge the gap between raw data and business action.

Currently open to **Data Analyst & Data Science internships** and full-time opportunities across India.

• TECHNICAL TOOLKIT •

Skills & Technologies

Languages
Python · SQL · R · JavaScript · HTML/CSS

BI & Visualization
Power BI · Tableau · Excel · Matplotlib · Seaborn · DAX

ML & Data Libraries
Pandas · NumPy · Scikit-learn · OpenCV · SciPy

Analytics Methods
EDA · Data Cleaning · Feature Engineering · Statistical Analysis · Predictive Modeling

Data Management
SQL Queries · Power Query · VLOOKUP · Pivot Tables · Data Transformation

Soft Skills
Analytical Thinking · Problem Solving · Communication · Attention to Detail · Team Collaboration

• WORK HISTORY •

Experience

Artificial Intelligence Intern
Jun 2025 – Aug 2025

AI & Machine Learning Research · Face Recognition Project · Remote

- Engineered an end-to-end face recognition pipeline using **PCA (Eigenfaces) + Backpropagation ANN** with 100 hidden neurons, achieving high multi-class recognition accuracy.
- Evaluated k = 10–70 eigenfaces and **identified optimal performance at k = 50–70**, producing a full model evaluation report for deployment guidance.
- Implemented **threshold-based distance metrics** for imposter detection — zero false acceptance in testing.
- Applied PCA to reduce high-dimensional facial image data while preserving key discriminative features.

• SELECTED WORK •

Projects

• PROJECT 01

Sales Performance Dashboard

Interactive Power BI dashboard analyzing 10,000+ sales records across regions — real-time drill-down by product, region, and time period for business decision-making.

10K+ Records · ~18% Revenue KPI · ~60% Time Saved

Power BI · DAX · Excel · Data Visualization

• PROJECT 02

Customer Churn Prediction

End-to-end churn analysis on 50,000+ customer telecom dataset. Built a classification model identifying the top 3 churn drivers with actionable retention insights.

50K+ Customers · 89% Accuracy · 3 Key Drivers IDU

Python · SQL · Pandas · Scikit-learn · Seaborn
